Hypothesis Testing II: z tests, t tests, and confidence intervals

Introduction to Data Science Algorithms

Jordan Boyd-Graber and Michael Paul

OCTOBER 6, 2016

Same Story

- Form a hypothesis
- Get some data
- Compute test statistic
- Reject hypothesis if p -value low enough

Important difference

- Assumes data come from normal distribution
- Can cause problems if diverges too much normal
- (How can you tell?) χ^2 goodness of fit

Goodness of Fit
