Probability Practice

Introduction to Data Science Algorithms

Jordan Boyd-Graber and Michael Paul

SEPTEMBER 4, 2016

Administrivia

- HW 1 Up, autograder available early next week
- Ask questions on Piazza
- Office hours by appointment
- Python assumptions
- Clarification on HW1

Big Picture

- Probabilities
- Need to have intuitions for later models
- Key ideas: marginal distributions, independence

Marginal Probabilities

- A voter can either be a Democrat or Republican (f) and has an age (A)
 - $p(F = D) = .45$
 - $p(A < 30, F = D) = .2, p(A < 30, F = R) = .1$
 - $p(A > 50, F = D) = .1$
 - $p(30 \leq a \leq 50) = .3$

Marginal Probabilities

- A voter can either be a Democrat or Republican (f) and has an age (A)
 - $p(F = D) = .45$
 - $p(A < 30, F = D) = .2, p(A < 30, F = R) = .1$
 - $p(A > 50, F = D) = .1$
 - $p(30 \leq a \leq 50) = .3$
- What is $p(30 \leq A \leq 50, F = D)$?
- What is $p(30 \leq A \leq 50, F = R)$?
- What is $p(A > 50, F = R)$?

Solving the Marginal Probabilities

| | D | R | Marginal |
|---------------------|-----|----|----------|
| < 30 | .2 | .1 | .3 |
| $30 \leq a \leq 50$ | | | |
| > 50 | .1 | | |
| Marginal | .45 | | 1.0 |

Solving the Marginal Probabilities

| | D | R | Marginal |
|---------------------|-----|----|----------|
| < 30 | .2 | .1 | .3 |
| $30 \leq a \leq 50$ | | | .3 |
| > 50 | .1 | | |
| Marginal | .45 | | 1.0 |

Solving the Marginal Probabilities

| | D | R | Marginal |
|---------------------|-----|-----|----------|
| < 30 | .2 | .1 | .3 |
| $30 \leq a \leq 50$ | | | .3 |
| > 50 | .1 | | .4 |
| Marginal | .45 | .55 | 1.0 |

Solving the Marginal Probabilities

| | D | R | Marginal |
|---------------------|-----|-----|----------|
| < 30 | .2 | .1 | .3 |
| $30 \leq a \leq 50$ | x | | .3 |
| > 50 | .1 | | .4 |
| Marginal | .45 | .55 | 1.0 |

Solving the Marginal Probabilities

| | D | R | Marginal |
|---------------------|-----|-----|----------|
| < 30 | .2 | .1 | .3 |
| $30 \leq a \leq 50$ | x | y | .3 |
| > 50 | .1 | | .4 |
| Marginal | .45 | .55 | 1.0 |

Solving the Marginal Probabilities

| | D | R | Marginal |
|---------------------|-----|-----|----------|
| < 30 | .2 | .1 | .3 |
| $30 \leq a \leq 50$ | x | y | .3 |
| > 50 | .1 | z | .4 |
| Marginal | .45 | .55 | 1.0 |

$$.2 + x + .1 = .45$$

$$x + y = .3$$

$$.1 + z = .4$$

Solving the Marginal Probabilities

| | D | R | Marginal |
|---------------------|-----|-----|----------|
| < 30 | .2 | .1 | .3 |
| $30 \leq a \leq 50$ | .15 | y | .3 |
| > 50 | .1 | z | .4 |
| Marginal | .45 | .55 | 1.0 |

$$.2 + x + .1 = .45$$

$$x + y = .3$$

$$.1 + z = .4$$

$$x = .45 - .1 - .2 = .15$$

Solving the Marginal Probabilities

| | D | R | Marginal |
|---------------------|-----|-----|----------|
| < 30 | .2 | .1 | .3 |
| $30 \leq a \leq 50$ | .15 | .15 | .3 |
| > 50 | .1 | z | .4 |
| Marginal | .45 | .55 | 1.0 |

$$.2 + x + .1 = .45$$

$$x + y = .3$$

$$.1 + z = .4$$

$$y = .3 - x = .3 - .15 = .15$$

Solving the Marginal Probabilities

| | D | R | Marginal |
|---------------------|-----|-----|----------|
| < 30 | .2 | .1 | .3 |
| $30 \leq a \leq 50$ | .15 | .15 | .3 |
| > 50 | .1 | .3 | .4 |
| Marginal | .45 | .55 | 1.0 |

$$.2 + x + .1 = .45$$

$$x + y = .3$$

$$.1 + z = .4$$

$$z = .4 - .1 = .3$$

What if age and party were independent?

| | D | R | Marginal |
|---------------------|-----|-----|----------|
| < 30 | | | .3 |
| $30 \leq a \leq 50$ | | | .3 |
| > 50 | | | .4 |
| Marginal | .45 | .55 | 1.0 |

What if age and party were independent?

| | D | R | Marginal |
|---------------------|------|-----|----------|
| < 30 | .135 | | .3 |
| $30 \leq a \leq 50$ | | | .3 |
| > 50 | | | .4 |
| Marginal | .45 | .55 | 1.0 |

What if age and party were independent?

| | D | R | Marginal |
|---------------------|------|------|----------|
| < 30 | .135 | .165 | .3 |
| $30 \leq a \leq 50$ | | | .3 |
| > 50 | | | .4 |
| Marginal | .45 | .55 | 1.0 |

What if age and party were independent?

| | D | R | Marginal |
|---------------------|------|------|----------|
| < 30 | .135 | .165 | .3 |
| $30 \leq a \leq 50$ | .135 | | .3 |
| > 50 | | | .4 |
| Marginal | .45 | .55 | 1.0 |

What if age and party were independent?

| | D | R | Marginal |
|---------------------|------|------|----------|
| < 30 | .135 | .165 | .3 |
| $30 \leq a \leq 50$ | .135 | .165 | .3 |
| > 50 | | | .4 |
| Marginal | .45 | .55 | 1.0 |

What if age and party were independent?

| | D | R | Marginal |
|---------------------|------|------|----------|
| < 30 | .135 | .165 | .3 |
| $30 \leq a \leq 50$ | .135 | .165 | .3 |
| > 50 | .18 | | .4 |
| Marginal | .45 | .55 | 1.0 |

What if age and party were independent?

| | D | R | Marginal |
|---------------------|------|------|----------|
| < 30 | .135 | .165 | .3 |
| $30 \leq a \leq 50$ | .135 | .165 | .3 |
| > 50 | .18 | .22 | .4 |
| Marginal | .45 | .55 | 1.0 |

Expected Value

In Las Vegas the roulette wheel has a 0 and a 00 and then the numbers 1 to 36 marked on equal slots; the wheel is spun and a ball stops randomly in one slot. When a player bets 1 dollar on a number, he receives 36 dollars if the ball stops on this number, for a net gain of 35 dollars; otherwise, he loses his dollar bet. Find the expected value for his winnings.

Expected Value

In Las Vegas the roulette wheel has a 0 and a 00 and then the numbers 1 to 36 marked on equal slots; the wheel is spun and a ball stops randomly in one slot. When a player bets 1 dollar on a number, he receives 36 dollars if the ball stops on this number, for a net gain of 35 dollars; otherwise, he loses his dollar bet. Find the expected value for his winnings.

$$35 \cdot \frac{1}{38} + -1 \frac{37}{38} =$$

Expected Value

In Las Vegas the roulette wheel has a 0 and a 00 and then the numbers 1 to 36 marked on equal slots; the wheel is spun and a ball stops randomly in one slot. When a player bets 1 dollar on a number, he receives 36 dollars if the ball stops on this number, for a net gain of 35 dollars; otherwise, he loses his dollar bet. Find the expected value for his winnings.

$$35 \cdot \frac{1}{38} + -1 \frac{37}{38} = -0.052 \quad (1)$$

Expected Value

In a second version of roulette in Las Vegas, a player bets on red or black. Half of the numbers from 1 to 36 are red, and half are black. If a player bets a dollar on black, and if the ball stops on a black number, he gets his dollar back and another dollar. If the ball stops on a red number or on 0 or 00 he loses his dollar. Find the expected winnings for this bet.

Expected Value

In a second version of roulette in Las Vegas, a player bets on red or black. Half of the numbers from 1 to 36 are red, and half are black. If a player bets a dollar on black, and if the ball stops on a black number, he gets his dollar back and another dollar. If the ball stops on a red number or on 0 or 00 he loses his dollar. Find the expected winnings for this bet.

$$1 \cdot \frac{18}{38} - 1 \cdot \frac{20}{38} =$$

Expected Value

In a second version of roulette in Las Vegas, a player bets on red or black. Half of the numbers from 1 to 36 are red, and half are black. If a player bets a dollar on black, and if the ball stops on a black number, he gets his dollar back and another dollar. If the ball stops on a red number or on 0 or 00 he loses his dollar. Find the expected winnings for this bet.

$$1 \cdot \frac{18}{38} - 1 \cdot \frac{20}{38} = -0.052 \quad (2)$$

Is Entropy Non-negative?

We know that

$$\log p(x) \leq 0 \tag{3}$$

Is Entropy Non-negative?

We know that

$$\log p(x) \leq 0 \tag{3}$$

if $0 \leq x \leq 1$. Thus,

$$-\log p(x) > 0. \tag{4}$$

Is Entropy Non-negative?

We know that

$$\log p(x) \leq 0 \tag{3}$$

if $0 \leq x \leq 1$. Thus,

$$-\log p(x) > 0. \tag{4}$$

And multiplying by a non-negative probability means

$$-p(x) \log p(x) \geq 0, \tag{5}$$

so their sum is non-negative.
